# Scenario 1

In this first scenario, during a high load period, many applications will attempt to query the database server. There is a **risk** of non-compliance to complete the task in <u>1 second</u>.
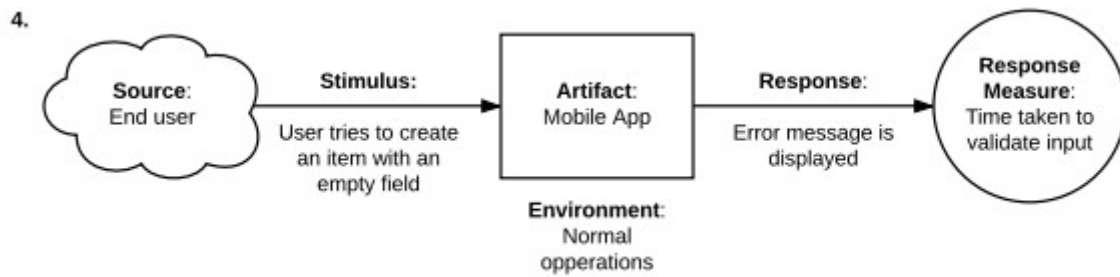

Scenario 2

In the second scenario, as there is no username and password for the "login", unauthorized access may occur. There is **risk**.
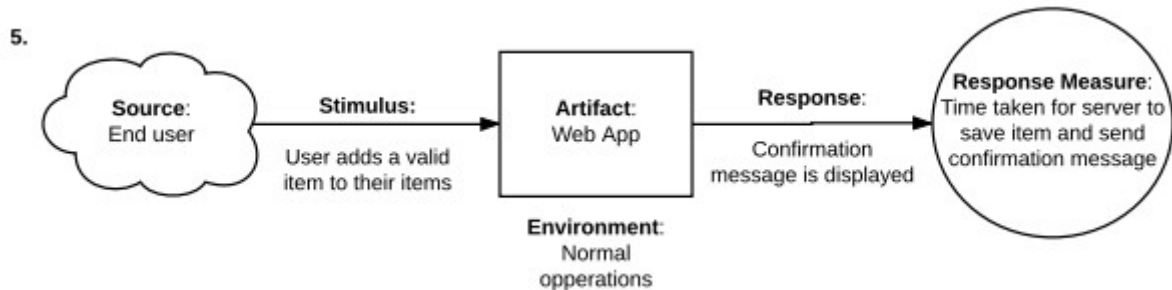

Scenario 3

In the third scenario, there is a **risk** of access without a password.
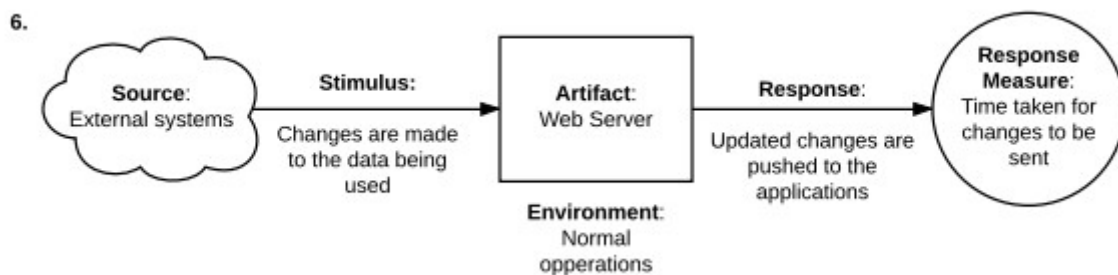

Scenario 4

In the fourth scenario, there is **no risk**.

Scenario 5

In the fourth scenario, there is **no risk**.

Scenario 6

In the sixth scenario, there is a **sensitivity point**, as the data may be out of date.

Scenario 7

In the fourth scenario, there is **no risk**.
